

Dr Bonnie Furman is an Agricultural Officer – Plant Genetic Resources (Agrobiodiversity) in the Seeds and Plant Genetic Resources Team within the Plant Production and Protection Division at FAO Rome. Her work focuses on conservation of plant genetic resources for food and agriculture, particularly *ex situ* and on-farm. Prior to FAO, she worked in genebank curation and management with ICARDA in Aleppo, Syria; the Agricultural Research Service of the United States Department of Agriculture, and with the CIMMYT Maize Genebank in Mexico. She has also held academic positions in Costa Rica and the United States. Dr Furman holds a BSc in Agronomy from the University of Wisconsin-Madison, MSc in Plant Genetics Resources and Plant Breeding from the University of California-Davis and a PhD in Conservation Genetics from North Carolina State University – all in the United States.
