

Nikos Misyrlis has graduated of German school in Thessaloniki city, North Greece and studied Geology which he actually has never practiced in his life. Ever since the decay of '90s he is working as a “green” contractor.

The last 10 years of his life, he maintains his private incubator in which a variety of aromatic herbs, medical plants and traditional varieties of vegetables are produced Agriherb (<https://openfarm.gr/farms/agriherb/>).

Being a co – partner with ELGO Dimitra, the university of Ioannina in Greece, the SISTADA, the Venus info company and finally the incubator Vitsios, we do participate in Eco Variety program, where we record, recognize and reproduce indigenous forest fruits and traditional fruit trees.
